Step 4: This is login page by mail id and if they don't have the account they can able to register by clicking register button.

Step 5: This is the home page of the application and all the category available should be here and only 5 for now others they will add in the admin panel and when they click the cart icon it will go to cart page food and liquor flow will be same and other the flow will be different.

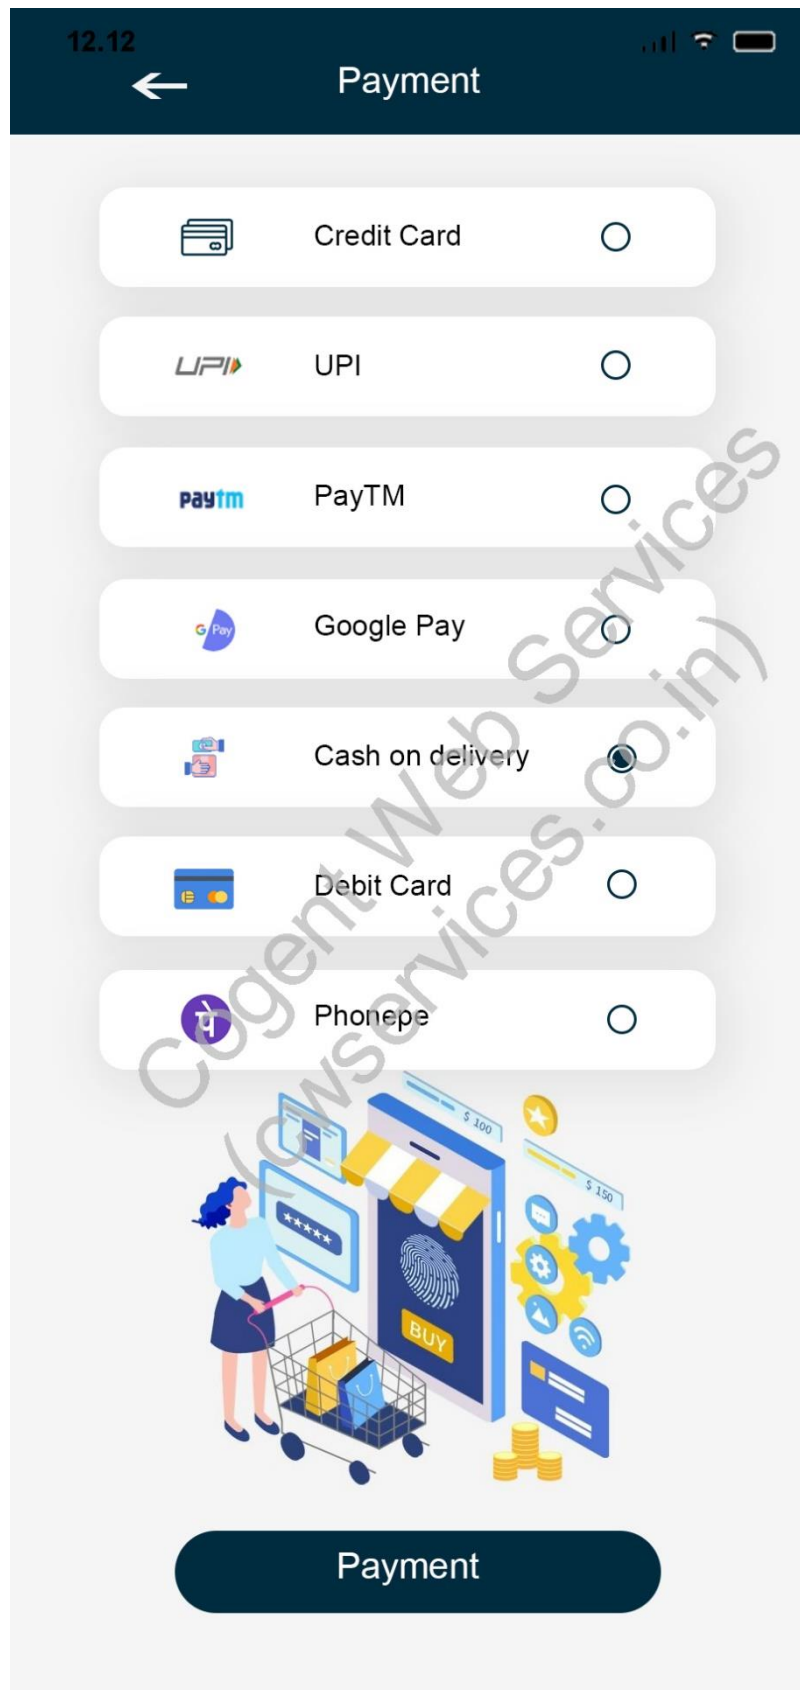

Step 6: Now we will see the side menu bar options and then we will see the flow of each category and this is favorite page all the product which the user add favorite will come here and the delivery time also there should be there rate and product name rating share option should be there when they click share they can able to share by message or through social media this is same for all page where share option is there

Step 7: This is my cart page and they can delete the product and all the product they added to cart and they can go to payment

Step 8: If they buy now then they can select the payment methods and only for the cash on delivery we have designed and for other you please see the flipart and develop those other pages.

Step 9: This is cash on delivery page they can fill the details and move on to next page.

The image shows a mobile application interface for a 'Cash On Delivery' form. At the top, there is a dark blue header bar with the time '12.12' on the left, a back arrow icon, the title 'Cash On Delivery', and signal, Wi-Fi, and battery status icons on the right. Below the header, the form consists of several light gray rounded rectangular input fields stacked vertically. The fields are labeled: 'Full Name', 'Full Address' (with a link 'Add Live Location' to its right), 'Pincode', 'Nearby Landmark', 'Mobile Number', and 'Alter Mobile Number'. At the bottom of the form is a dark blue rounded rectangular button labeled 'Save'. A large, diagonal watermark reading 'Cogent Web Services (cwservices.co.in)' is overlaid across the center of the form.

Step 10: If they confirm the order then this page will come and if they press continue shopping

Step 11: This is my order page change this order to my order and if they already ordered they can track and the past order also they can able to cancel the order by clicking that and the reason pages please develop by yourself.

Step 12: They can be able to track the order by tracking they can find their order status and total amount and delivery time and status should be mentioned there and when they click the map they can see in the google map the real tracking in map develop that by yourself.

Step 13: If they didn't order then it will direct to the home page step 5

Step 14: This is profile page all the details should be there like name mobile number email and other options develop by yourself by seeing flipkart or amazon we have designed only the important page other they said to develop by development and if they click the login they can able to login by clicking this and the profile page we can able to change the profile phone when they click on profile then the image they can able to see like whatup and then they can able to change

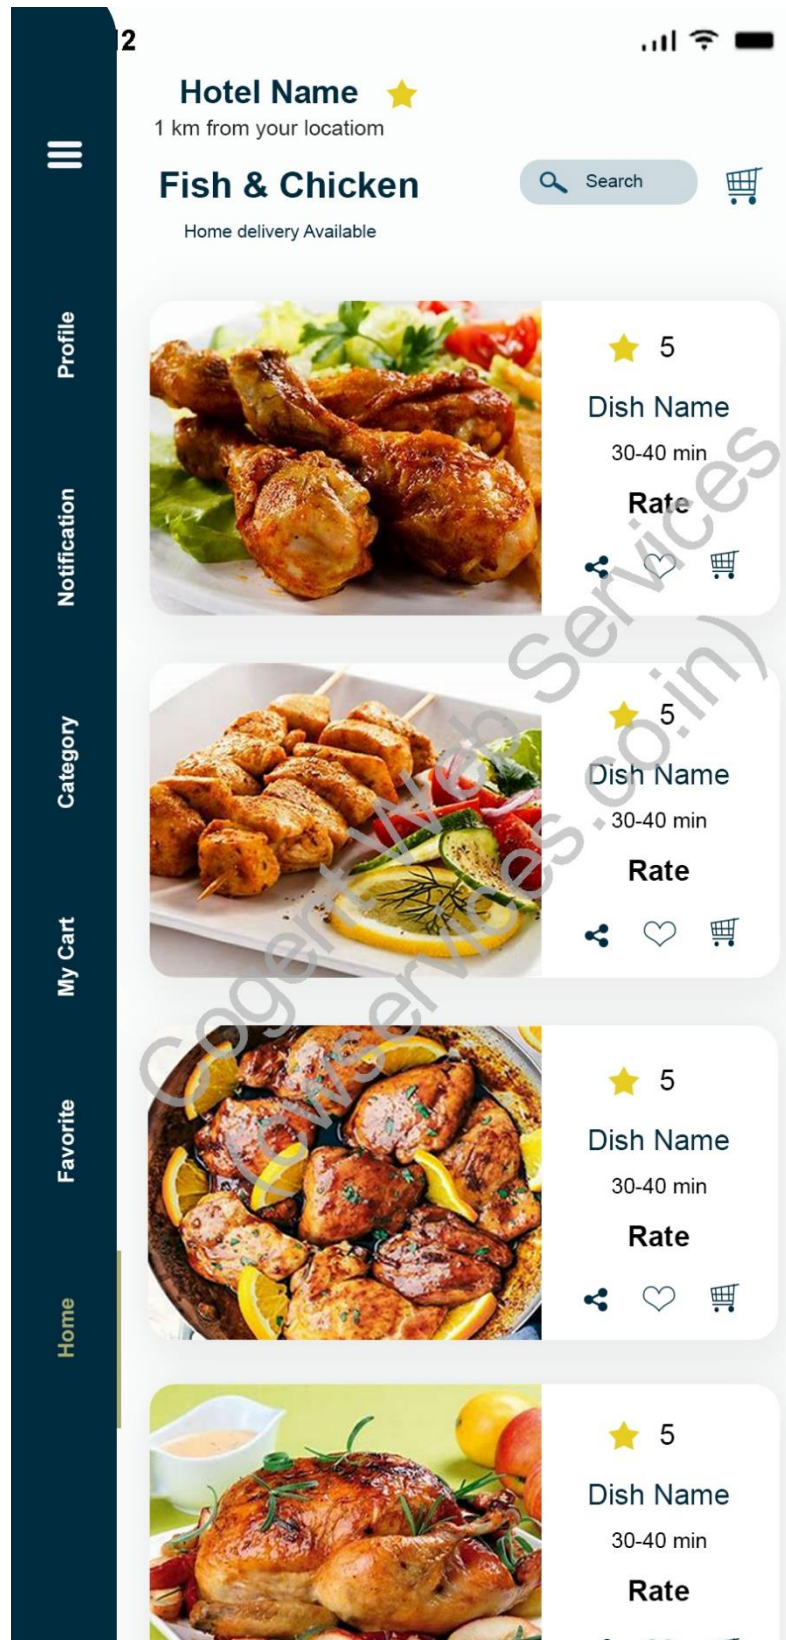

Step 15: this page we are continuing the step 5 when they click the food then all the hotels nearby should come and same for all the category for liquor also that shop will come for medicine will come and same for all for example we design this page

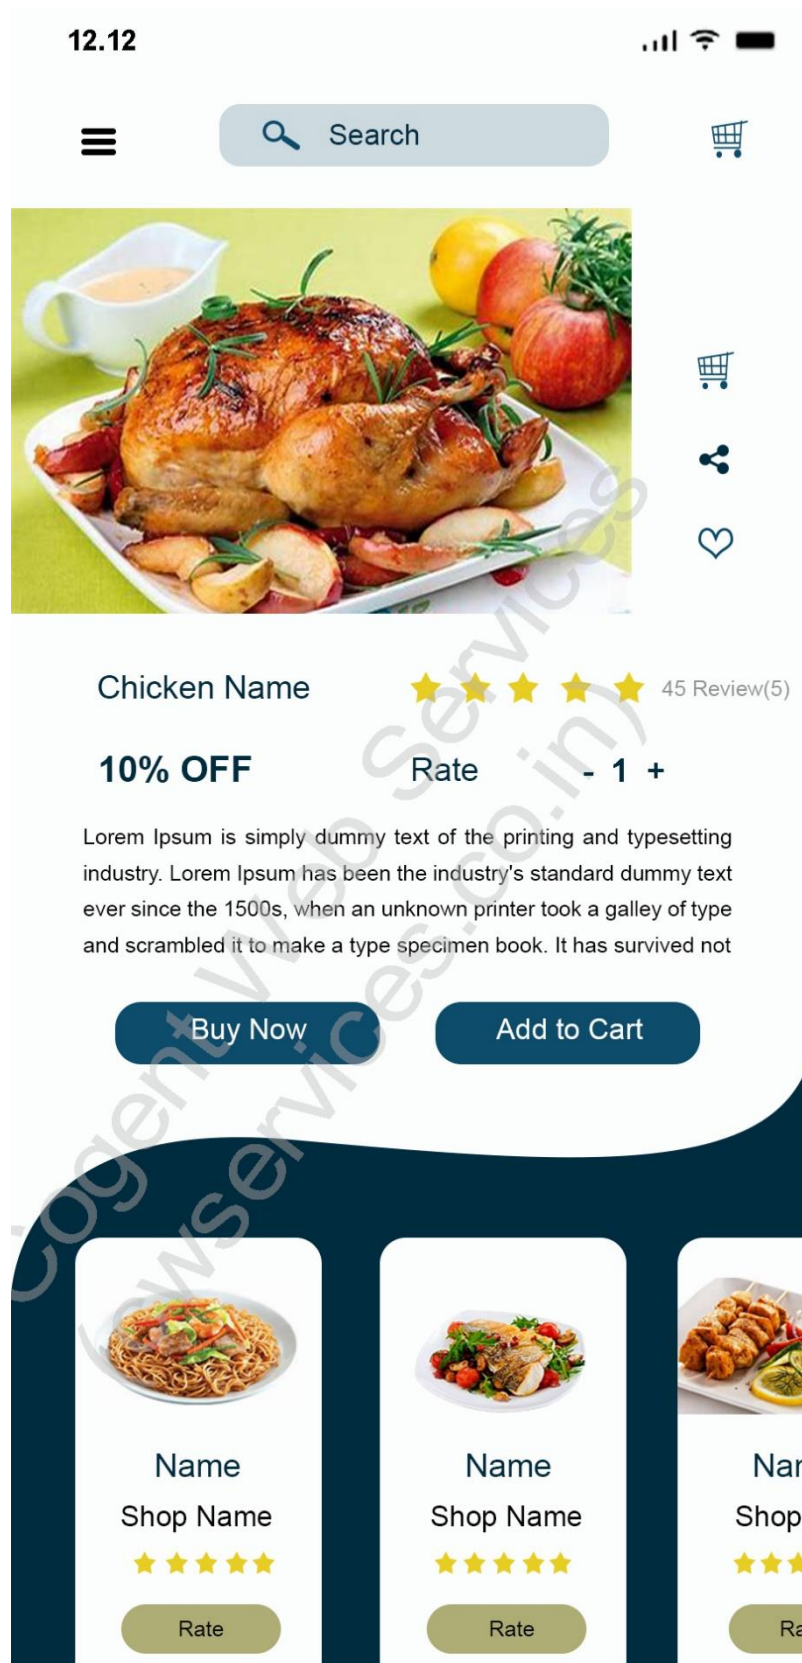

Step 16: When they select the hotel then their hotel products will come and they can upload the product list they want as photo or pdf and all the details you can send as handwritten or as pdf and also the trending food will available at the bottom and filter option is also there that you can develop by own.

Step 17: When they click on the chicken and fish then this page will and all the category like this page will come design is same but the product image only varies develop for all the pages like this and this is only an example page all variety of that product should come.

Step 18: When they click on any product then that product will come and one icon is to add cart and other is share and other is favorite all the offer rating everything should be shown like this page for all the product and at the bottom the similar product will come if they add to cart then step 7 to 9 will come

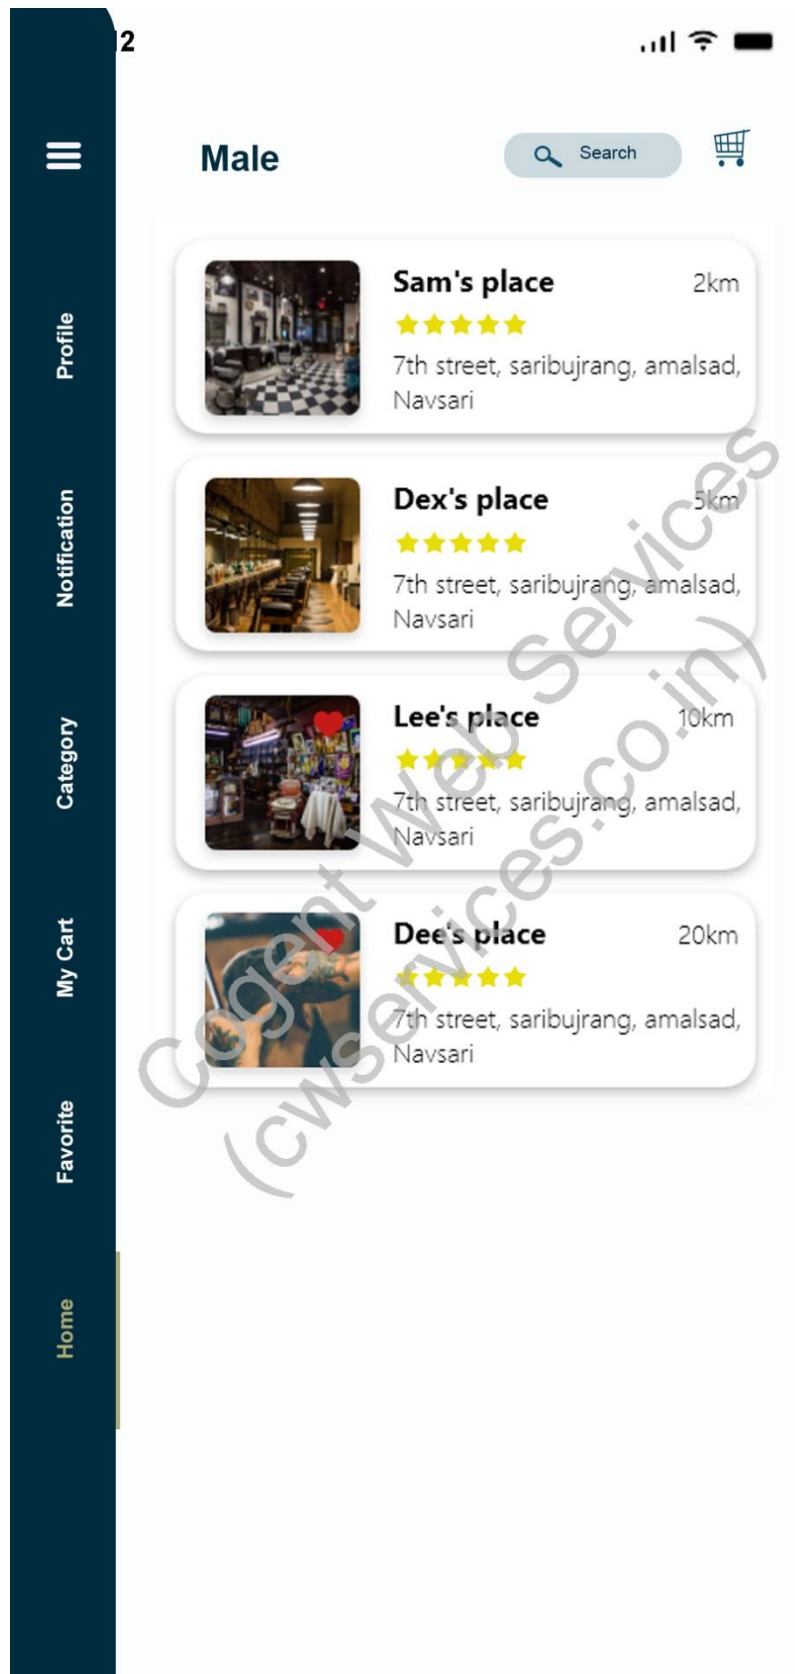

Step 19: This is same as the food liquor

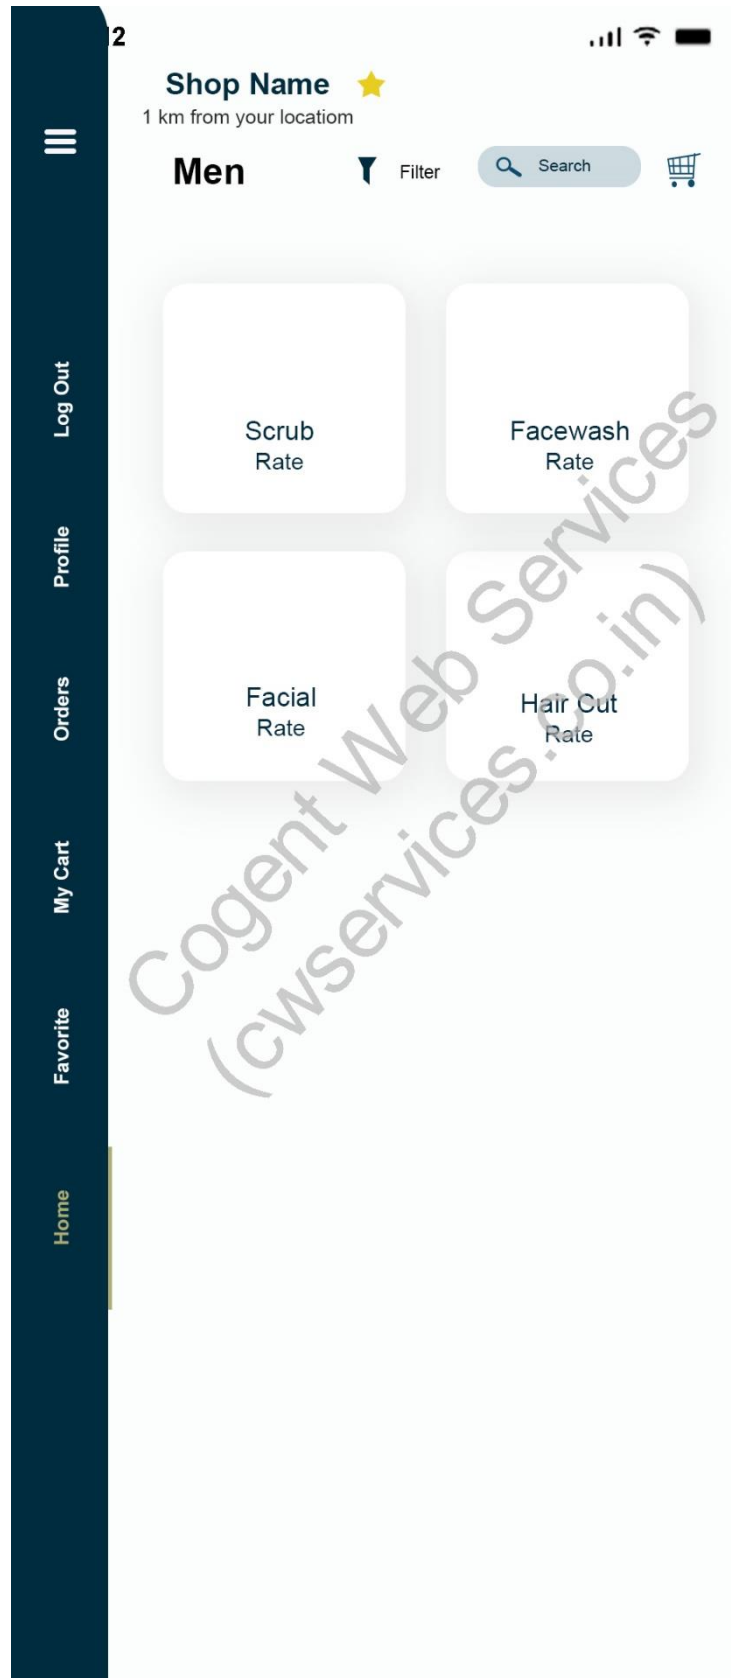

Step 20: When they click the salon and parlor in step 5 then this page will come here they can select their option

Step 21: When they click mail then all the salon will come they can select their liked one

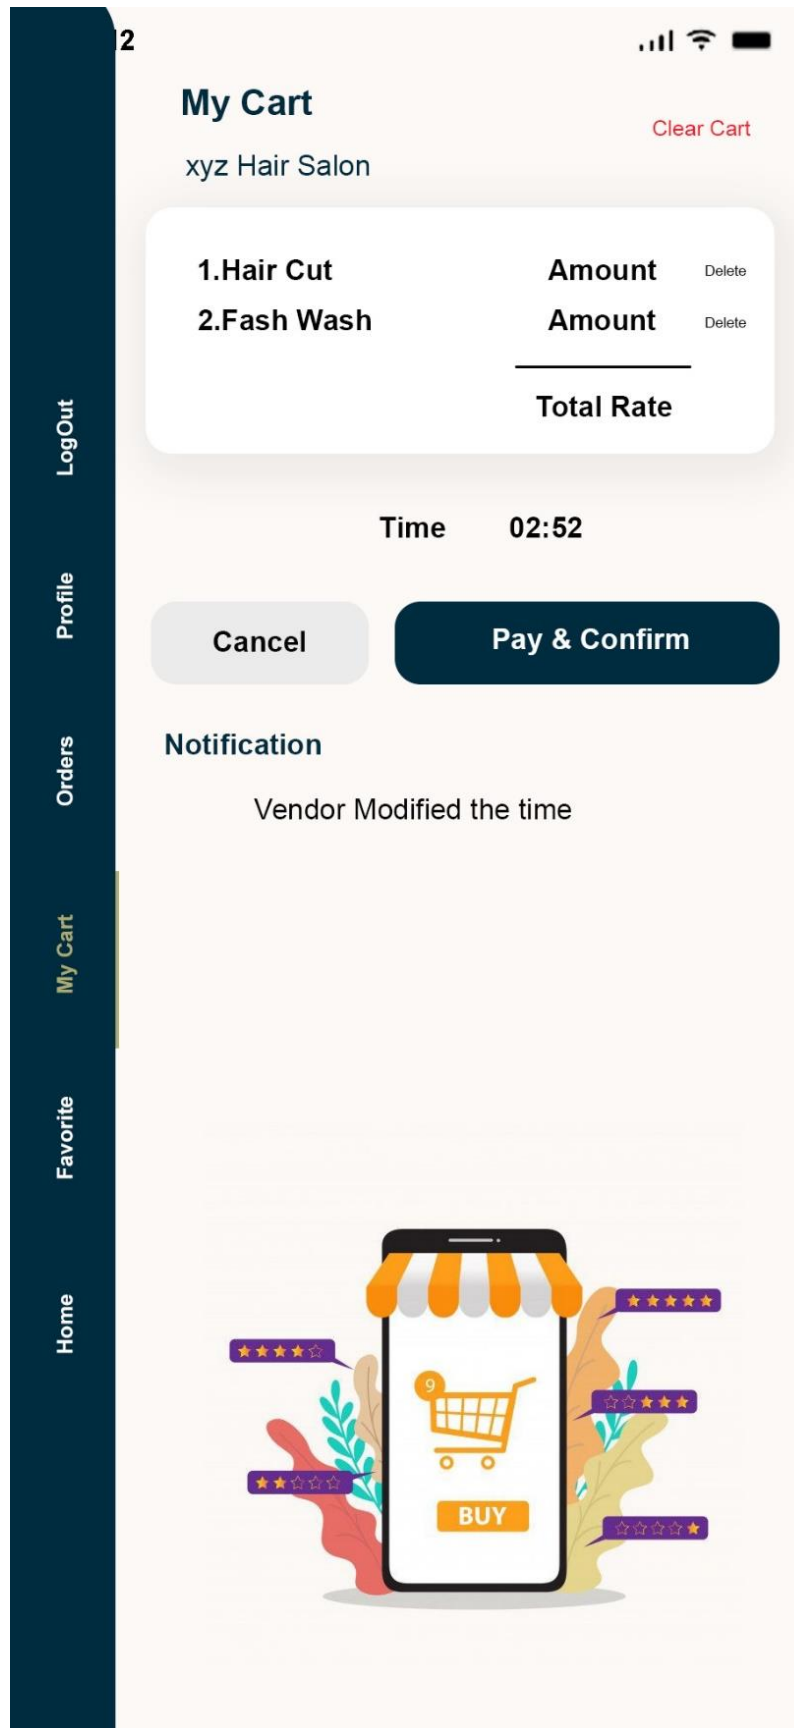

Step 22: All the men category available should come here they can select and book them

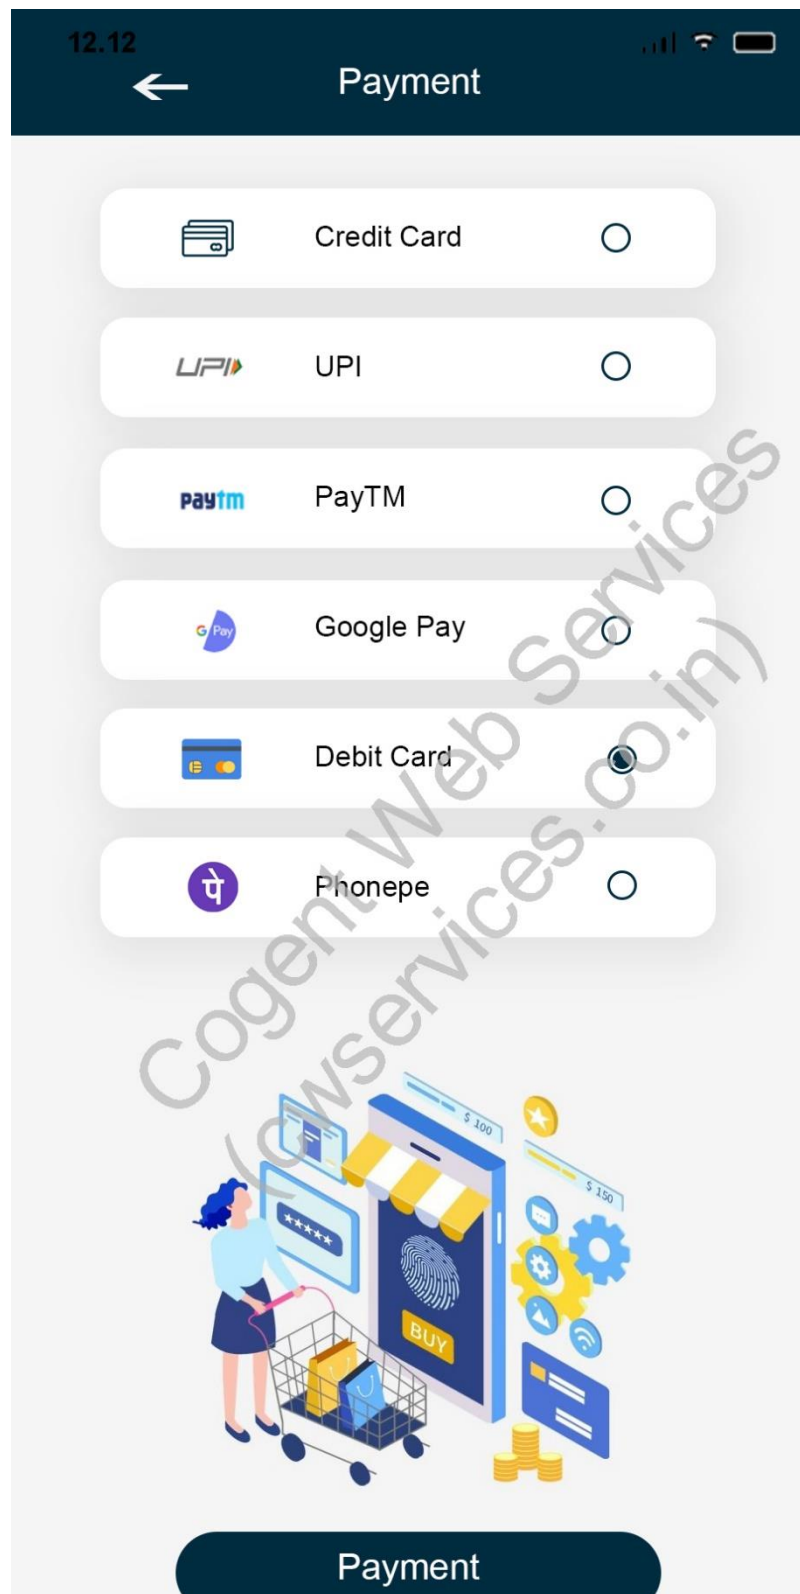

Step 23: In this all the details you have selected will come and then they will request for appointment then the barber will set the time and send to them again they get a notification that barber given the timing or you can select the preferred time if that was available vendor will give appointment at that time

Step 24: Then after barber set the time then the timing should come and they are suitable with that time they can pay and confirm

Step 25: There is no cash on delivery except food and liquor and : If they buy now then they can select the payment methods and only for the cash on delivery we have designed see the step 9 and step 10 for other you please see the flipart and develop those other pages.

Step 26: When they click on the medicine in step 5 then this page will come they can type the medicine name or they can upload and they can upload the prescription given by the doctor

Step 27: When they click that upload icon then 3 options will come: photo, gallery, and doc and camera. And the medical shop will receive this and they will, if they have that medicine, enter the price and send to them like a barber. And the user can see the rate. If he doesn't want that much amount of medicine, then he will modify the rate and then send to the shop. If then they will reduce the medicine amount or quality, or they will cancel. All the notification will get to the user in their app, then they can confirm the order. These pages developed by own I have explained the function.

Step 28: When they click the spray and sanitizer then this page will come and if they select any option then it will go to next page

Step 29: Then they will enter the area then the vendor will get the notification they will send the amount if they was satisfied they can buy or they can cancel the order or they can request for the price amount reduce these pages develop by own.
